Our educational philosophy prioritizes emotionally-connected patient care and we prepare our students for this approach from their first days. They experience frequent face-to-face interaction with patients in such clinical settings as family practices; La Casita de la Salud, a student-run clinic in East Harlem; and with a standardized patient pool in our Clinical Skills and Simulation Center. These hands-on experiences equip our students with strong interpersonal and clinical foundations upon which to build their careers.
NYMC SCHOOL OF MEDICINE'S GRADUATE MEDICAL EDUCATION (GME) prepares medical school graduates for practice in a medical specialty or subspecialty. With approximately 900 residents and fellows in 70 programs, New York Medical College boasts the second-largest GME consortium of teaching hospitals in the country. NYMC GME programs provide experienced, board certified faculty; clinical experience; and the academic support and resources required to train residents to become competent, board certified physicians in their specialty.

SCHOOL OF MEDICINE CLINICAL SITES/AFFILIATES
